ALL-ROUNDER FOR YOUR GARDEN

Uncompromising brand quality has a long tradition at SABO. For more than 90 years, sophisticated engineering is combined with superior materials and functional design in Gummersbach, Germany.

This has resulted in thoroughly reliable tools that make working in and around your garden as efficient and enjoyable as possible. And it is precisely this expertise that we - together with our SABO specialist retail partners - want to convince you of, both today and in the future.

In 2024, we are once again offering a wide range of advanced technologies and features. On the following pages, you will find our current range of products, from the powerful petrol models to the convenient battery system and the multi-functional lawn tractors - with practice-oriented advice and valuable tips for successful lawn care. We also take a closer look at our new products for professional and municipal garden and landscape maintenance. At the back of the catalogue you will find a complete overview of our product range. You will also find a comparison of the relevant technical data.

We invite you to discover the full SABO range!

New for the 2024 season

NO GREEN THUMB REQUIRED

We are unveiling a new visual identity era: From 2024, our commercial products will also wear the striking and dynamic SABO red - even with a new makeover, our pledge of unparalleled quality and performance remains unwavering. Discover this new appearance, whilst relying on the same excellent performance and proven quality for which we have been renowned for decades.

MADE FOR PROFESSIONALS: SABO E-POWER

More on page 22

Get to know the environmentally friendly, robust and powerful commercial battery-powered machines from SABO. Be it a mower with side discharge or a scarifier - all models are powered by the efficient 56 V EGO battery technology and easily handle the rigours of commercial gardening and landscaping.

HOW WE GOT TO WHERE WE STAND

SABO - from an ambitious founder to a thriving corporate ethos.

1932

In its early days, SABO was solely a distributor of oils and greases for the automotive industry. While Walter Born left the company just a year later, Heinrich Sanner established the second pillar of his business: the technical innovations department - with the constant objective of providing his customers with the highest possible quality of service. SABO also manufactured grease fittings for aeroplanes, traded in hand-washing detergents and managed a special graphite business. Sanner spent the early years exploring new areas of operation - until his first encounter with the gardening market.

2024

SABO's product range has expanded considerably in the 90 years since the company was founded. In addition to petrol and battery-powered lawnmowers, it now includes scarifiers, mulchers, lawn tractors and machines for municipal use. Battery-powered garden tools such as brush cutters, leaf blowers and hedge trimmers are also part of the portfolio. The one thing that has not changed to this day - and which will never change - is the extremely high quality standard of SABO: to always give the best in all aspects. This is the living legacy of the founders Heinrich Sanner and Walter Born and the reason why the SABO brand today stands for the highest quality and reliability among hobby and professional gardeners.

2007

At SABO, the user has always been at the centre of everything we do. To continuously improve the working experience, SABO introduced the Anti-Vibration System for professional lawnmowers in 2007. The system significantly reduces oscillations at the wrist. As a result, the user can work safely and comfortably throughout the whole day.

2017

No power cord, no petrol, no local emissions. SABO is bringing a new category of gardening tools onto the market with state-of-the-art battery technology - for both the professional and the amateur gardener. From lawnmowers and brushcutters to hedge trimmers and leaf blowers, powerful lithium-ion batteries allow convenient use anywhere.

1952

The war has come to an end. Sanner noticed that a lot of the hedges throughout Germany had been left to grow for a long time. He was on the lookout for a way in which the time-consuming and tedious task of hedge pruning might be made easier for the average person. And so, in 1952, the overgrown hedges prompted him to develop the electric hedge trimmer. The company's founder quickly realised the opportunities in this market - and just like the hedges, the idea quickly grew bigger and bigger.

1954

Heinrich Sanner was determined to develop further solutions. His aim was to simplify people's work in parks and gardens. And with great success: In 1954, SABO developed its first motorised lawnmower for professional use. This was a pioneering step. Sanner has always strived to achieve the best in everything created. Thanks to the economic upswing in Germany, motorised lawn mowers were also becoming increasingly popular with amateur gardeners.

SABO recognised that the greatest opportunities for growth lay in the motorised lawnmower sector as well as in the fittings sector. Sanner began to systematically market both sectors.

HOW IT ALL STARTED.

It all began shortly after the Great Depression in 1932: Times were bad. Despite this, Heinrich Sanner and his partner Walter Born were optimistic when they founded the company SABO Central Distribution for Petroleum Products and Technical Innovations. Good to know: SABO is an acronym - SA for Sanner, BO for Born. And thus SABO was founded.

1965

It was in 1965 that SABO developed the world's first fully hydraulic lawn mower for professional use. For the user, this meant even less work, less wear and tear, more maintenance-friendly operation and, as a result, greater economic efficiency. In 1969, the two company divisions, lawn mowers and fittings, were separated. Both divisions developed independently. The development and production of lawn mowers remained in Gummersbach. The fittings division moved to Wiehl.

1981

At the beginning of the 1980s, SABO expanded its product range with the addition of scarifiers. Since then, SABO scarifiers have been characterised by quality, durability and performance. Features that SABO's lawn-mowers were already known for.

1978

Once again, it is the spirit of invention that catapults SABO forward at the end of the 1970s: in 1978, the brand launches the patented TurboStar System™. Thanks to this innovative concept, even damp grass could now be cut to perfection and be collected in its entirety in the grass catcher bag. Turbo also meant an enormous economic acceleration: SABO took the decisive growth step and became market leader in the lawnmower sector at the beginning of the 1980s.

THE SEARCH FOR THE PERFECT LAWN MOWER

5 TIPS TO HELP YOU CHOOSE THE RIGHT ONE

How to recognise a great lawnmower and choose the one that suits you best.

If you own a garden with a lawn, a lawn mower is a vital part of your equipment. But just what kind of lawn mower do you really need? And which features should it offer? Here are five tips to help you find the right lawn mower for you.

1. POWER AND SIZE

Battery mower, petrol mower or lawn tractor?

The choice of which machine is best for you depends not least on the size of the area to be mowed and therefore on the cutting width of the machine. Our battery-powered lawn mowers are compact and lightweight, and are recommended for small to medium sized lawns. Petrol mowers are ideal for areas of up to 5,000 m² in size. If you have a plot of land larger than that, consider the comfort of working from the seat of a lawn tractor.

LAWN MOWING

Do you have a small or large lawn? Are you a hobbyist or a professional? Makes no difference! In our range of SABO lawn mowers, you will find just the right machine to meet all your needs. From 36 to 54 cm cutting width, there are plenty of possibilities. You can choose between petrol or battery-powered operation. It is only when it comes to quality that there is no choice, because all of our lawn mowers are thoroughly tested as standard. To put it simply: What leaves our factory is solid and durable.

* Only walk-behind mowers and scarifiers are manufactured in Germany

2. BRAND NAME QUALITY

Who wants to have to buy a new lawn mower every couple of years? That's why quality is essential when making your choice. The blades need to be robust, the drive and transmission need to be designed for decades of use. Just like SABO lawnmowers, which undergo numerous endurance trials and test procedures to ensure that these requirements get met.

3. WARRANTY

Whether it is battery or petrol powered: **You want to be able to rely on your new lawn mower for a long time.** Therefore, it is a good idea to familiarise yourself with the details of the warranty conditions before purchase. SABO offers a guarantee of 15 years on the aluminium chassis of its lawn mowers**.

4. SPARE PARTS

Before buying a lawnmower, make sure that spare parts are available and check where you can get them. Avoid cheap „pirate“ products - their use can prove to be costly. Incidentally **SABO spare parts are frequently available on the market for many years even after a model has been discontinued.**

5. SERVICE AND SUPPORT

The best place to buy your lawn mower is from a specialist dealership. **An expert will be able to give you the best possible advice and explain the features and benefits of each machine in detail.** That's why SABO lawnmowers are traditionally sold through trained and authorised dealerships.

SCARIFYING

Regular „wellness“ treatments are essential for a healthy and uniform lawn. It all starts before you mow - by scarifying. SABO scarifiers use their blades to aerate the ground to a depth of just a few millimetres, pulling up any dead vegetation and, if necessary, collect it in a bag (available as an accessory). Needless to say, you can also rely on the well-known SABO quality and durability with our scarifiers.

CONVENIENT GARDEN MAINTENANCE

Do you have a big lawn to deal with? No worries! Our SABO 93-H, 103-H and 110-S lawn tractors can handle any job, no matter how big, and are a pleasure to use. Powerful and durable 4-stroke engines with continuously variable hydrostatic transmission develop plenty of power for many applications, such as sweeping or snow clearing. Accessories such as plough blades, sweepers and mulching wedges make SABO lawn tractors real all-rounders.

** SABO warranty conditions apply

PASSION MADE IN GERMANY*

How SABO and its employees
have ensured the famous
SABO quality for decades.

* Only walk-behind mowers and scarifiers are manufactured in Germany.

THE DAY THE LAWN MOWER LEARNT TO FLY.

At SABO, we like to tell the anecdote of company founder Heinrich Sanner on the subject of quality control: Sanner simply tossed the lawnmowers out of the window. They were then examined to see whether they were still in good working condition. True to the motto: We don't build toys, we build professional equipment. But how do you maintain your reputation as a manufacturer of high-quality, reliable garden tools over many decades? Can quality be „commanded“? Or does it come from a tradition that is both lived and cultivated?

NOTHING IS GOOD UNTIL IT HAS BEEN WELL TESTED

Nowadays, SABO equipment does not fly out of the window. And yet it is a long and difficult road from the first sketch to the first use on the lawn. Before the individual components are put together in production, we check that they meet our strict quality requirements. The individual components are then assembled in our workshop in Gummersbach, close to Cologne, Germany. Numerous quality tests and inspections follow. In this way, we make sure at every stage of the development process that the mowers really do meet our requirements.

LAWN MOWER TESTING

Every new prototype of a SABO lawn mower has to undergo an ordeal before it goes into mass production. In an impact test, for example, the mechanical strength of the blade is tested using a steel tube and rod. The vibration, drive and gearbox tests simulate the stresses and strains of everyday use. The blade testing checks the structural strength of the blades. Only after one million load cycles is the blade approved for serial production. In the ball impact test, hardened steel balls are shot into the running blade and chassis, providing information on structural strength and shielding. In addition, our experts put the products through their paces under the toughest conditions in the open field test. All this is the hallmark of a SABO product and is the guarantee of our renowned high quality over a lengthy time period.

COLLABORATION IS KEY

The SABO brand is not only characterised by strict quality standards, but above all by a strong community of motivated people. The principle of production at SABO follows its own set of rules. Quality is not dictated here, but deliberately developed, making it the goal of every single employee. Everyone involved is called upon to get involved. This means taking responsibility and getting involved beyond their own workplace and department. Every day, all employees at SABO make sure that quality is not an exception, but the rule.

COMMUNITY SPIRIT

One of the most important advantages at SABO is the close proximity of sales, development and production at the company's premises in Gummersbach. The routes are short, people know each other and talk face to face. In this way, colleagues become partners in the workplace - and everyone becomes a part of the SABO team. This exceptional feeling of community begins at SABO itself and extends through all departments all the way to our retail partners and customers.

We live and consciously cultivate this sense of community, even beyond the factory gates. It is the cornerstone of a vivid corporate culture and products that meet the highest quality and durability expectations. The experience of more than six decades is built into every SABO mower as standard, which you as a customer can see and feel at first glance. Our SABO machines offer the highest level of safety, performance and reliability. Everything that you would expect from a good partner.

SABO BATTERY POWER FOR YOUR GARDEN.

With the SABO battery system you are perfectly equipped for all gardening tasks: The powerful 40 volt lithium-ion battery is compatible with all products in the system and enables efficient and low-noise operation on the lawn and in the garden.

Leaf blower
LB-934

With **continuously variable, lock-on speed and boost function**. Makes quick work of foliage and debris.

The heart of the SABO battery system is the powerful and reliable 40 volt lithium-ion battery. It can be easily removed and inserted for charging.

Scarifier
33-V ACCU

With a cutting width of 33 cm and 14 sharp scarifying blades, the 33-V ACCU is essential for getting your lawn in top shape.

Hedge trimmer
HC-66

Equipped with **double-sided sharpened blades**. The multi-function handle can be adjusted to three positions for ergonomic working, and the robust **magnesium die-cast body** ensures high stability.

Brush cutter
ST-30

Brush cutter
MS-36

Whether you are dealing with thick grass or undergrowth, our battery-powered brushcutters are the right tools for the job. The MS-36 can be used with either a spool or a high-grade blade and is delivered in a convenient package that **includes a blade, spool and shoulder strap**.

Chainsaw
CS-25

Comes in a package with two swords and chains.

Weighing 3.8kg, it is light in the hand and can be used with either a 25 cm or 35 cm sword.

Lawn mower
47-ACCU VARIO

The SABO battery system includes a total of seven lawn mowers, with and or without drive.

This includes the 47-ACCU VARIO with a dual battery slot.

The SABO TurboStar System™ ensures optimum cutting performance, even when the grass is damp.

Our robust aluminium chassis, with a 15-year guarantee*, is extremely durable and the variable rear-wheel drive makes it easy to work on slopes.

*SABO warranty conditions apply

SABO 47-VARIO E

Top of the range mower with powerful SABO engine: Enjoy high mowing comfort with a 65 litre collector capacity and variable drive. The electric instant start allows you to start quickly with the ignition key.

SABO 47-ACCU VARIO

The variable rear-wheel drive keeps this large battery-powered lawnmower moving forward safely. The central indicator on the handlebar provides easy speed control and a clear indication of battery status. Compatible with the powerful 40 V battery.

LAWN MOWERS

Novice, hobbyist or professional? Small, medium or large lawn areas? It doesn't matter. Our range of SABO lawnmowers has just the right machine for every need.

TURBOSTAR™-SYSTEM

Most of our mowers are equipped with SABO's patented TurboStar™ system, which ensures that the grass is raised before it is cut and is effectively transported into the collection bag - even if it is damp.

ALUMINIUM CHASSIS

Many of our SABO mowers are equipped with a high-quality aluminium chassis. This makes them lightweight and extremely robust - and includes a 15-year warranty*.

REAR WHEEL DRIVE OPTION

Do you mow on rough or challenging terrain? No worries: the optional rear-wheel drive ensures that your SABO and your mowing project progress safely. On many models, this can be variably adjusted to the walking speed.

HIGH PERFORMANCE BLADE

The single-piece blade is made from the highest quality spring steel and is manufactured in accordance with the most stringent production and safety guidelines.

* SABO warranty conditions apply

SCARIFIERS

Scarifying loosens the lawn soil to create space for new grass growth and to ensure the grass roots receive sufficient amounts of air, water and nutrients. This enables fresh, healthy and dense new grass to grow back.

YOUR CHOICE

Petrol or battery? For private or professional continuous operation? When it comes to SABO, you have the choice - but when it comes to quality, you can only get the best.

RAZOR-SHARP BLADES

SABO scarifiers dethatch the ground to a precision of millimetres with their blades made of high-quality spring steel. Thanks to the continuously variable depth adjustment, you can precisely calibrate SABO scarifiers to the requirements of your lawn.

LET THE RESULTS SPEAK FOR THEMSELVES

Remove grass clippings, dead leaves, moss and weeds from your lawn smoothly and organically.

LEAVE A TRAIL - OR DONT

SABO scarifiers pull up dead grass and transport it into the collection bag which is available as an optional accessory.

SABO 33-V ACCU

With battery operation and a working width of 33 cm, it is ideal for small to medium-sized lawns. The dual battery slot, which is powered by the powerful 40 V battery from the SABO battery system, ensures a longer runtime.

SABO 38-BV

The powerful 38-BV petrol scarifier delivers outstanding results with its 38 cm working width, powerful 4-stroke OHV engine, robust and durable aluminium body and 15 sharp verticutter blades.

LAWN TRACTORS

Discover the effortless efficiency of the SABO lawn tractors for your large-scale lawn areas. Equipped with powerful 2-cylinder engines, impressive performance and hydrostatic drive, they are designed to tackle even the most demanding jobs.

EASY COLLECTION BOX EMPTYING

TRAILER HITCH

CONVENIENCE FOR LARGE LAWNS AND GARDENS

Our powerful models deliver uncompromising cutting performance and convenient control from the driver's seat. Not only does this save you effort and energy, it also makes the job of mowing larger lawns effortless.

LED HEADLIGHTS

Powerful LED headlights provide optimum visibility even when working in the dark.

STURDY BUMPER BAR

For increased durability and shock absorption.

EXTRA-WIDE TYRES

Effective lawn protection with extra wide tyres.

MOWING DECK EASY TO REMOVE

TRUE MULTI-TALENTS

The SABO lawn tractors can be adapted for use in winter. Making snow removal fun! Or you can use the practical sweeper attachment to quickly and effectively clean up around your property.

Snow plough

For winter operation of your SABO lawn tractor

Tielburger TS125

Turn your lawn tractor into a powerful clearing vehicle with the TS125 snow plough. The included rubber edge is designed to protect the floor.

Sweeper attachment

120 cm working width, including debris container

Tielburger TK520

With the TK520 mounted sweeper, property maintenance is done in no time. Available with numerous useful accessories for every application.

High-quality accessories by

tielburger

SABO 54-PRO VARIO

A truly professional rear discharge mower. The 54-PRO VARIO is manoeuvrability, easy to handle and offers a cutting width of 54 cm and a large 75-litre grass bag. Its 4-stroke OHV engine is extremely robust and durable.

SABO 52-PRO S K A PLUS

With a cutting width of 50 cm and a 6 litre fuel capacity, this side discharge mower is ideal for use up to 5,000 m². The variable drive makes the job a lot easier for the professional user. Low vibration due to the anti-vibration system.

PRO MODELS

Powerful and resilient. With powerful engines and lots of features. For large lawns and plots. For decades many municipal and commercial users have relied on our on our reliable, robust technology.

FLEXIBLE CUTTING HEIGHT ADJUSTMENT

Steel wheels provide impressive traction and durability. The individually adjustable cutting height of our professionals allows you to switch between cutting heights with ease.

ANTI-VIBRATION SYSTEM

Reduces vibrations on the handlebar, allowing the mower to be operated throughout the working day without compromising comfort or safety. Available on most professional models.

ROBUST TRANSMISSION

The professional transmission on our mowers provides torque output independent of shifting force, ensuring high performance and a long service life.

PRO ALUMINIUM CHASSIS

The aluminium chassis is extremely robust and designed for continuous use in the harshest conditions. Additional steel reinforcements on the inside and outside further increase durability.

SABO E-POWER: PRO BATTERY SYSTEM.

The professional battery-powered machines from SABO are the best companions you can get for effective and efficient operation. They offer powerful performance, flexibility and reliability to achieve outstanding results with any task thanks to their modern 56 V battery drive from EGO. In addition, all SABO battery powered pro machines are weather resistant. No matter what the weather, they are ready for use all year round.

MADE FOR PROFESSIONALS

The three professional rear discharge battery-powered lawn mowers offer a cutting width of between 43 and 54 centimetres and are particularly suitable for use in noise-sensitive environments such as parks, residential areas or in the immediate vicinity of schools and hospitals.

NEW

WEATHER? IS OF NO CONCERN!

EGO's advanced battery technology is ready for all weather conditions. Whether wind, rain, cold or high summer temperatures - the sealed cells of the 56V lithium-ion battery withstand the rain effectively.

PROFESSIONAL PRODUCT RANGE

All terrains are different. Each job requires a specific tool. SABO has the right pro machine to meet the requirements of every professional. Whether rear catcher, side discharge or mulcher. You have the choice. We have the SABO.

FOR PRECISE GROUND CONTROL

With the 45-PRO E V, you can bring new life to any lawn. With a ball-bearing mounted blade shaft, 19 high quality verticutter blades, a robust aluminium chassis and continuously adjustable work depth, you are up to any task.

Petrol mowers

The handlebar can be quickly and easily fastened or loosened using the quick-release mechanism. This makes space-saving storage of the mower particularly easy.

Mowing on an incline?
No worries: you can drive your SABO safely and easily with the engageable rear-wheel drive.

With the electric instant start, you can easily start your SABO lawnmower with an ignition key. No need to pull the starter rope.

**51-A
CLASSIC**

Includes a
Mulching kit

52-S A

A mulching blade and an additional
plug make it easy to convert your
SABO to a mulching mower.

54-VARIO

54-VARIO E

54-K VARIO B

SABO mower with 4-stroke
OHC engine from Yamaha.
Convenient blade brake
clutch, high quality
aluminium chassis
and more.

SABO 54-K VARIO B: When you let
go of the safety handle, the blade
stops rotating, but the engine
continues to run so that you can
effortlessly drive the mower
to empty the collector bag.
